

Environmental Policy Statement

Promethean World Limited and its subsidiary companies comprise a group of global education companies, operating under common management, that provide solutions which include hardware and software, to enrich, enlighten, and inspire the learning experience of current and future generations around the world.

As part of our commitment to continuous environmental improvement within our business, we strive to (i) prevent pollution that can have a detrimental impact on the environment, and (ii) comply with applicable environmental legal requirements.

As such, we have established an environmental management standard which includes a framework for setting and reviewing objectives and the planning to achieve established objectives.

Where feasible we will:

- Minimise consumption of non-renewable energy sources across all activities to ensure we meet continually improving energy performance standards.
- Minimise the waste we generate and the consequential environmental impacts by seeking opportunities to reduce, reuse, and recycle.
- Through the use of technological and operational solutions, seek ways to reduce the environmental impact of the transport of our products wherever practical.
- Work to ensure that the products, services, and materials which Promethean sources and purchases are as sustainable as practical.
- Work to minimize our carbon emissions and to the extent we are unable to reduce our carbon emissions, neutralize our verified carbon emissions using reputable and verifiable carbon offsets.

Through ongoing communication, training and education, our employees understand the environmental issues related to their activities and are expected to undertake such activities in line with goals of this Environmental Policy Statement.
